

D R A F T: WEL:af
29 August 1966

RECOMMENDATIONS:

1. Approve the concept of further planning for collocation of all departmental activities (except NPIC) at Langley. The separate study regarding the future of NPIC will determine its location.

2. Establish the Building Planning Group and direct all necessary planning and action on a priority basis for the construction of a special purpose building of approximately 325,000 sq. ft. at Langley. If desirable, a maximum cost figure--on the order of \$14,000,000--may be established for the proposed new building which can be completed in about four years from the date the additional planning and action is directed. Development of the site plans for this building should be within the framework of an overall "Master Plan" for Langley which might provide for additional buildings, roadways, parking areas and other facilities that may be required at some later date to collocate all departmental facilities at Langley.

a. Direct a priority study by all the major users of special purpose space which may require alteration or possible re-location within the next decade to determine the economics and feasibility of:

(1) Construction of new special purpose space suited to future needs with completion in about 1970, or,

(2) Alterations and/or expansion of existing special purpose space in present locations.

b. On the basis of the studies directed in 2a. above, select for housing in the new building (which may be called the Technical Support Building) such of the following activities as may be most economically and properly relocated to meet future requirements:

- (1) The Computer Center and related offices of OCS.
- (2) The Signal Center and its related functions.
- (3) Telephone frame room and related space.
- (4) Technical Services Division.
- (5) Office of Training

(6) Minor elements of other offices required for support of the new building or which further study may indicate as desirable for transfer to the special purpose building.
